Frontline also put out several online articles about the program, including one on the global demand for copper, made the full program available online and offered a transcript of the show. And coverage of Frontline's "Alaska Gold," was widely disseminated in newspapers, websites and blogs.

Fox News weighed in last week, with a piece headlined, "\$500 Billion Alaskan gold mine in upstream battle with EPA, salmon advocates." And, Jeanne Devon, aka Alaska Muckraker, wrote an opinion piece in Huffington Post called, "The Time to Toss Pebble Mine is Now. Really." She sets the dilemma with this: "It's an issue of fish vs. cyanide, Alaskans vs. multinational corporations, Native culture vs. the bottom line, sustainable jobs vs. instant gratification, and food security vs. greed. It's a battle between holding on to the best of our state, and the last great wild salmon run in the world, and letting it all slip away to line the pockets of the already wealthy multinational mining conglomerates. We have a lot at stake."

Lastly, with sockeye salmon season winding down in Bristol Bay, reports are in that over 20 million fish were harvested for an average of \$1 a pound – one of the bright spots in Alaskan salmon fisheries this year, some of which were closed after paltry fish returns.
